Incindra

INCINDRA FIT CHECK

You have your fit score. Here’s how I handle what you told me.

For each topic the Fit Check asked about: what I do, and what I don’t.

The system surfaces. Counsel, arbitrator, mediator or medical expert decides.

Incindra

WHAT SETS ME APART

Four things a chronology can’t do

Integrated systems analysis

One case knowledge graph across every provider, prior record and body system.

32 advanced queries

Causal links, the weight of each claim, a red team, opposing reports and deposition outlines.

Deterministic, not probabilistic

Same record, same version, same findings. Only Logos Assist is probabilistic, and labeled that way.

Every claim cited and weighed

Checked against its page, traced to graded research, weighed from strong to unsupported.

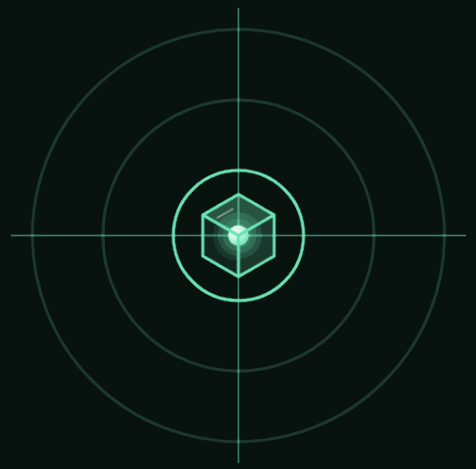

To be clear: the chronology is where every case starts. It isn’t why firms choose me.

Incindra

QUESTION 1 · HOW I HANDLE IT

AI on the other side of your case

- I read every page, every provider and the prior records into one case knowledge graph.
- 32 advanced queries test the record: causal links, the weight of each claim, gaps, contradictions and false logic.
- I flag the weak points in your own case before the opposing side finds them.

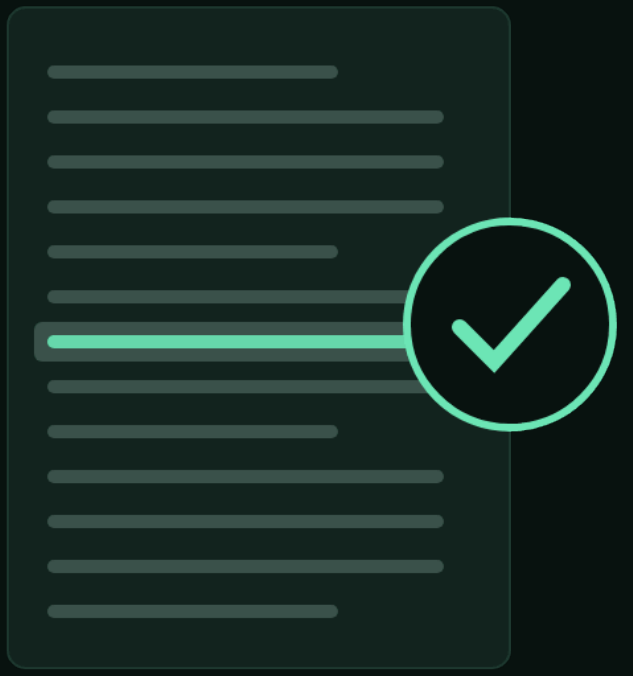

To be clear: I don’t predict how a court will rule. I show you the record.

Incindra

QUESTION 2 · HOW I HANDLE IT

When the opposing side has AI

- The opposing side may already use AI to read the same medical records.
- What matters is what can be checked: every claim I make is cited to its page and checked against that page.
- Same record, same version, same findings, whoever runs it.

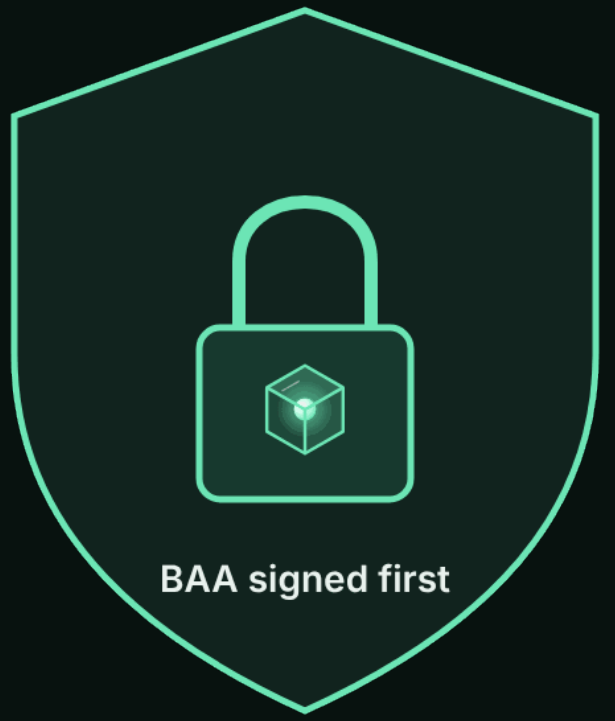

To be clear: The other side can use me too, unless you set up an exclusivity retainer with an Incindra medical expert.

Incindra

QUESTION 3 · HOW I HANDLE IT

Bringing AI into your firm safely

- One agreement, including a Business Associate Agreement, is signed before any record is loaded.
- Records stay within my boundaries, on your own control plane, and you can delete them at any time.
- Every run is versioned, and each report records where AI was used and which versions ran.

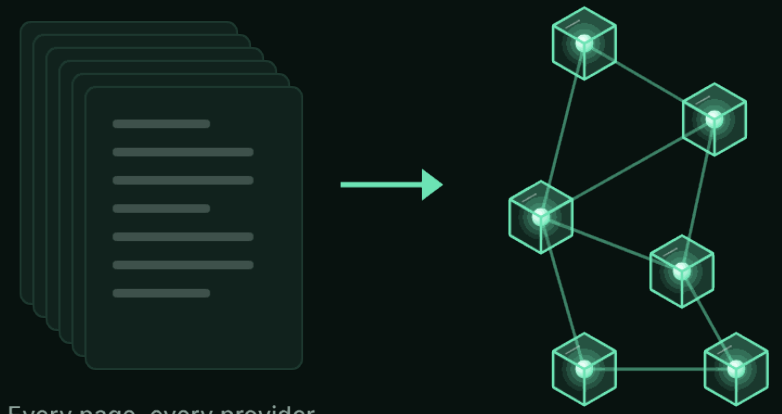

To be clear: SOC 2 is planned, not done yet.

Incindra

QUESTION 4 · HOW I HANDLE IT

Reading isn’t the hard part

- I read the whole record in one run, typically within a few hours, depending on its size.
- The hard part is connecting the facts across providers, years and body systems. That is what I am built for.
- Your team checks cited findings instead of building the connections by hand.

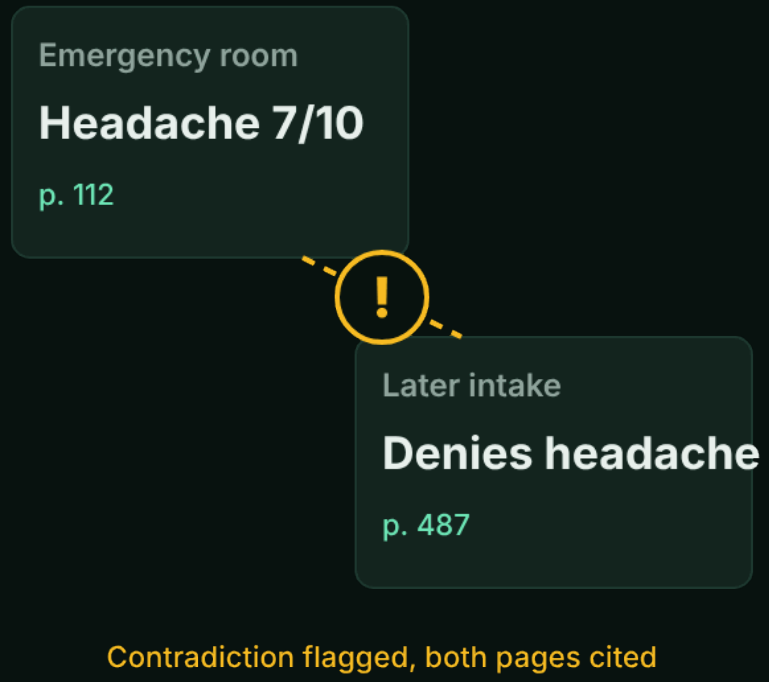

To be clear: You still read the pages that matter. I show you which ones.

Incindra

QUESTION 5 · HOW I HANDLE IT

Surprises at deposition

- My red team flags conflicts between providers, like a 7-out-of-10 headache in the ER and “denies headache” at a later intake.
- I surface prior history and alternative explanations from records before the incident.
- I list records the chart refers to that aren’t in your production.

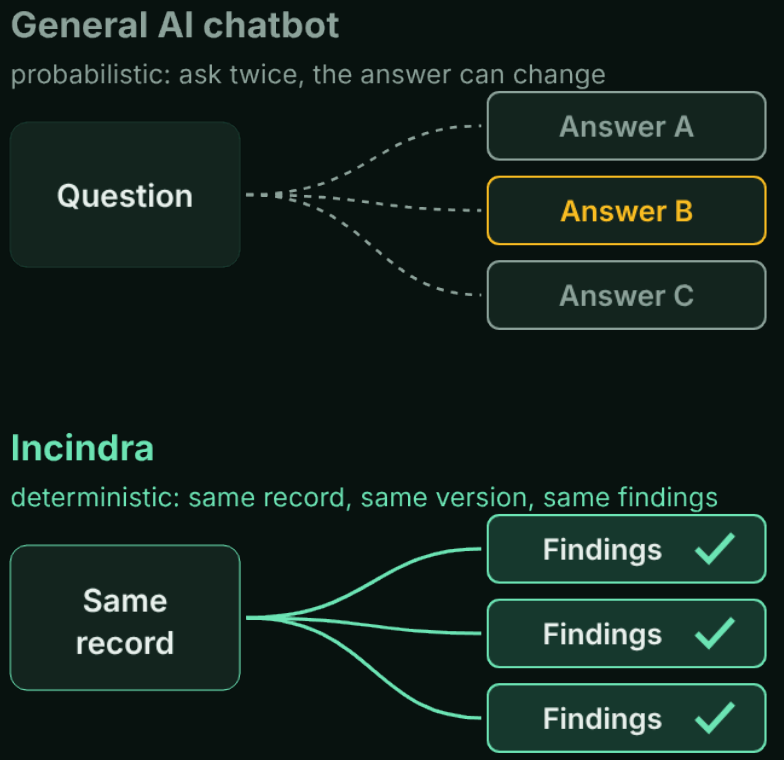

To be clear: Some of what I flag will hurt your case. Better you see it first.

QUESTION 6 · HOW I HANDLE IT

Deterministic, not probabilistic

- A general AI chatbot is probabilistic: ask the same question twice and the answer can change.
- My causal links, flags and 32 advanced queries are deterministic: the same record on the same version gives the same findings.
- Logos Assist, my question-and-answer part, is probabilistic and labeled that way, with each answer tied to its page.

To be clear: Keep the tools you like. I add repeatability, citations and the connections.

Incindra

QUESTION 7 · HOW I HANDLE IT

Beyond outside review

- 32 advanced queries go where a summary stops: causal links tested for timing and alternatives, the weight of each claim, a red team, confounders, tests and scales, opposing reports and deposition outlines.
- You pay per source page and per query, for what the case needs: order queries one at a time, or all 32 in a full report.
- A full report is double-checked before it reaches you, and gives you access to Incindra consultants.

32

advanced queries

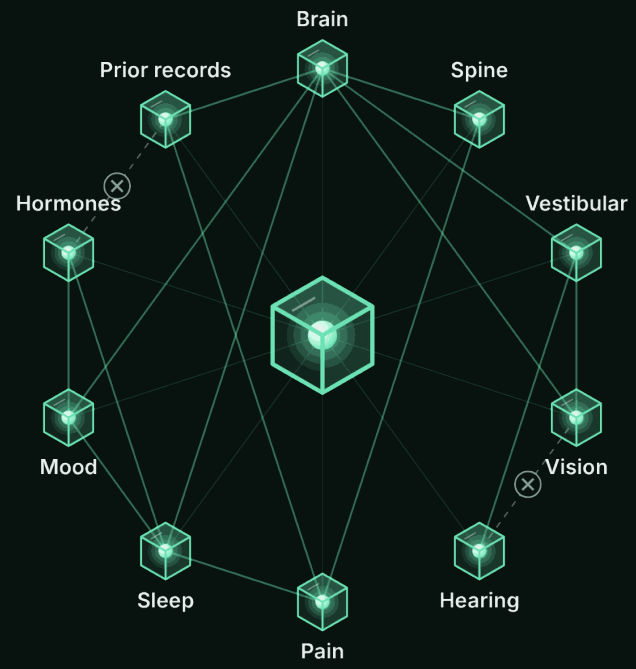

To be clear: Consultants are independent experts. Their review, opinion and any follow-up are billed by them, not by Incindra.

Incindra

QUESTION 8 · HOW I HANDLE IT

Integrated systems analysis

- One case knowledge graph across providers, prior records and body systems: brain, spine, balance, vision, hearing, pain, sleep, mood and hormones.
- Each causal link is tested for timing, alternatives and research support, then given a weight.
- A claim resting on one weak piece of evidence gets caught.

one case knowledge graph

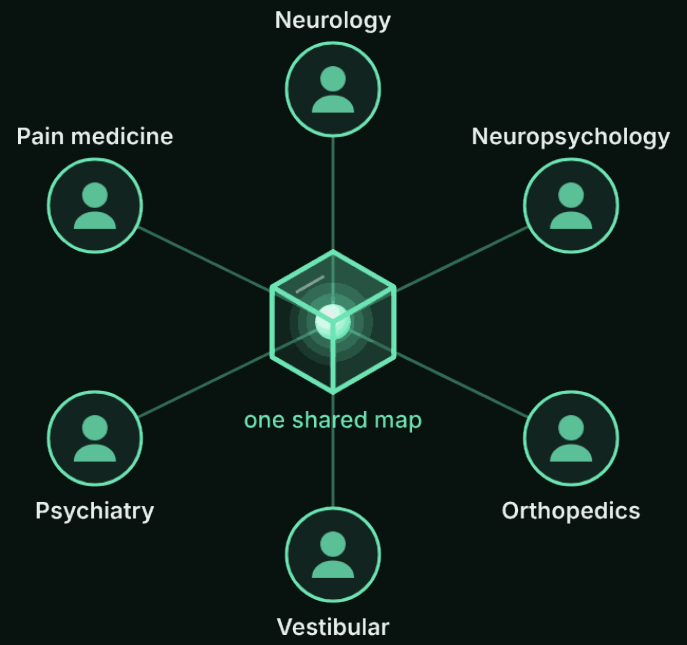

To be clear: Not everything connects. I show what connects and what doesn’t.

Incindra

QUESTION 9 · HOW I HANDLE IT

Your experts and the whole record

- Some experts cover one system; some cover several. Either way, each works from the same whole-record map.
- Findings beyond an expert’s own range are in front of them, cited, before deposition.
- Each expert sees how the systems they cover connect to the rest of the record.

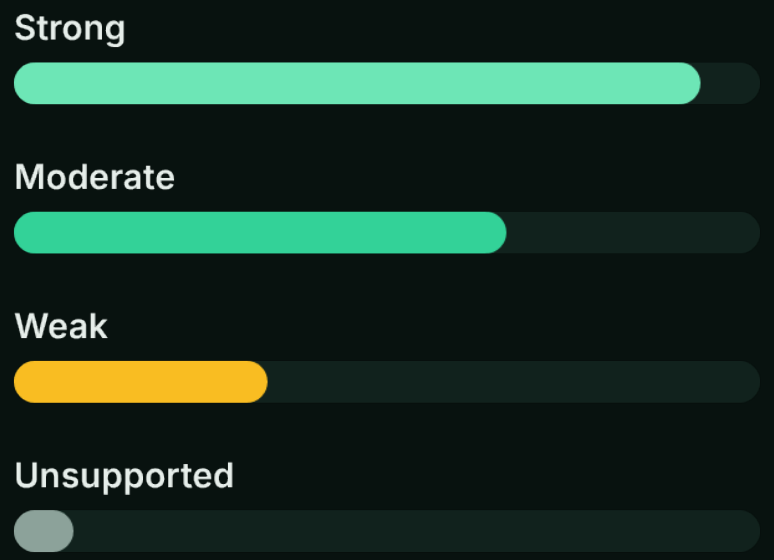

To be clear: I don’t replace your experts. I give them the whole record.

Incindra

QUESTION 10 · HOW I HANDLE IT

Opinions that miss the record

- My red team checks an opinion against the whole record: gaps, omissions, overstatement and analytical gaps.
- Each opinion is set beside the records it does or doesn’t account for, with the weight of its support.
- Courts now apply the expert-evidence rule more strictly. The whole record matters.

Each claim weighed by the strength of its support

To be clear: I don’t judge an opinion. You and your expert decide.

Incindra

QUESTION 11 · HOW I HANDLE IT

Showing how the work was made

- Deterministic: the same record on the same version gives the same findings.
- Auditable: every run records the model, ontology and evidence library versions used.
- Every claim cited to the page, with research for and against shown.

Records	every page, recorded ✓
Model	version recorded ✓
Ontology	version recorded ✓
Evidence library	version recorded ✓
Run	logged, reproducible ✓

What each case run records

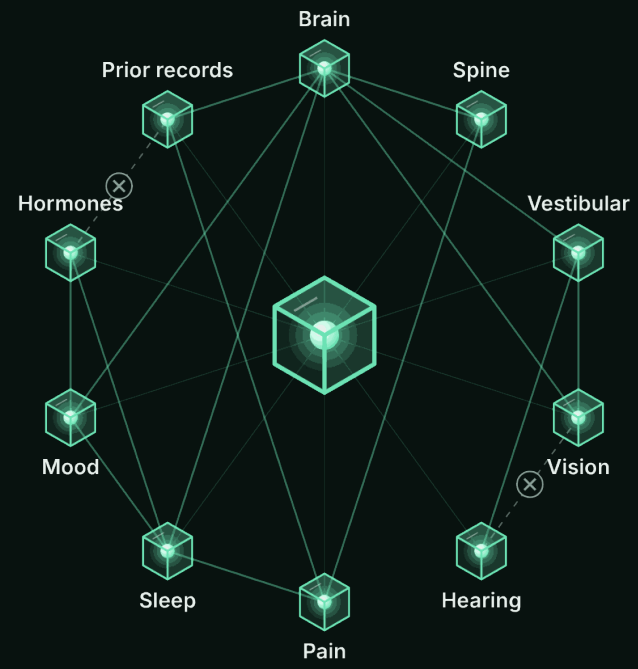

To be clear: My accuracy hasn’t been measured yet. The fairest test is a case you already know.

Incindra

QUESTION 12 · HOW I HANDLE IT

Cases outside your usual medicine

- I read every body system in a polytrauma record, not just the brain-injury pages.
- I show you the medicine, the gaps and the open questions early, before you decide.
- I help you see which kind of expert to retain.

one case knowledge graph

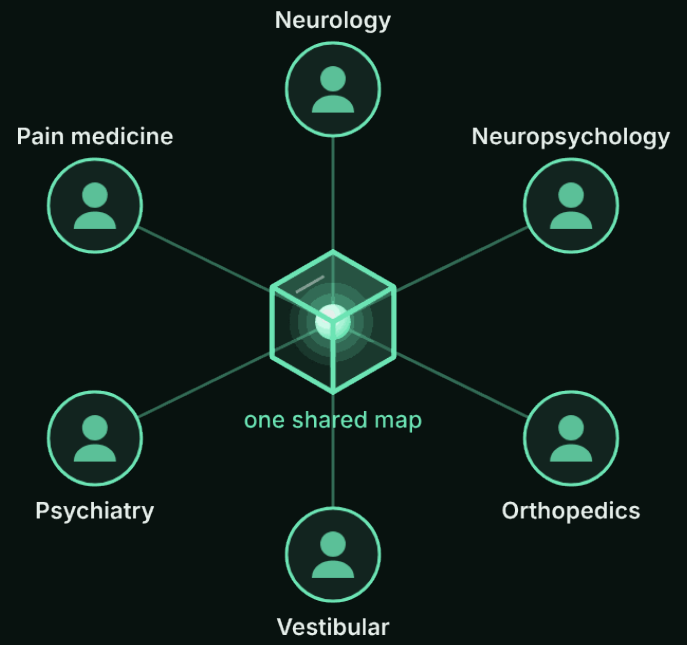

To be clear: I don’t replace the expert, or your judgment on whether to take the case.

Incindra

QUESTIONS 13–15 · WHO I'M BUILT FOR

Built for one kind of case

- Polytrauma and brain-injury cases with large medical records, often more than a thousand pages.
- Firms where no one has the time, or the training, to connect every body system.
- Plaintiff or defense: I read the record the same way for either side.

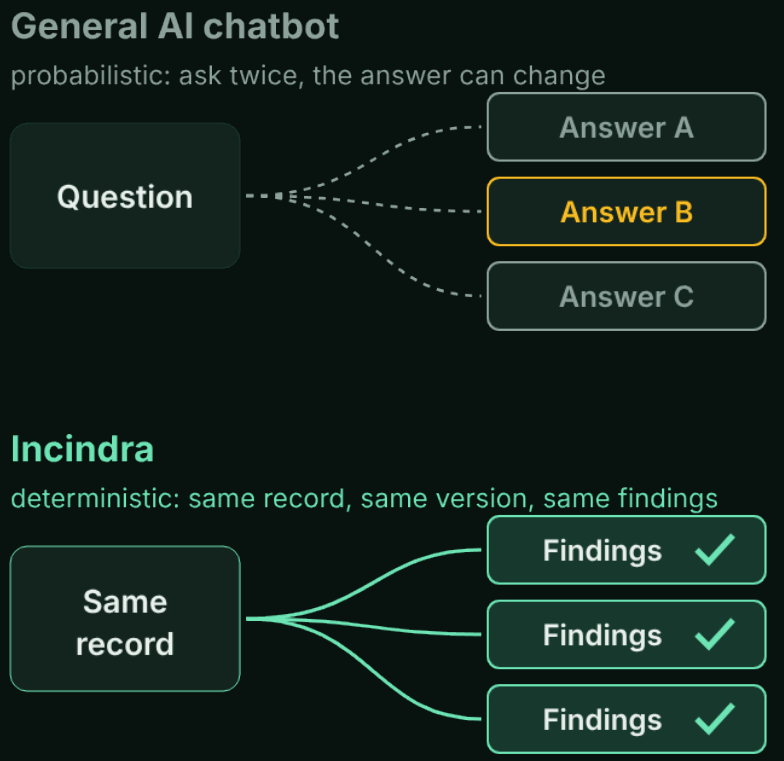

To be clear: if your cases rarely have large records, I'm probably not the right fit, and I'll tell you so.

Incindra

QUESTIONS 16–17 · HOW I HANDLE IT

Whatever you use now

- Nurse reviewers, staff, general AI and legal AI products all read the record. I read it and connect it.
- You don’t have to replace your current method to test me. Run one finished case and compare.
- Every finding is cited to its page, so your team can check me against what you have now.

To be clear: I won’t tell you another product is wrong. You make the comparison, on your own case.

Incindra

QUESTION 18 · HOW I HANDLE IT

Past the chronology

- A chronology and summary are the starting point. I give you both, with an executive summary.
- 32 advanced queries go further: causal links tested, the weight of each claim, provider conflicts, prior history, opposing reports and deposition outlines.
- Each box you didn’t tick is something you can test on a finished case.

32

advanced queries

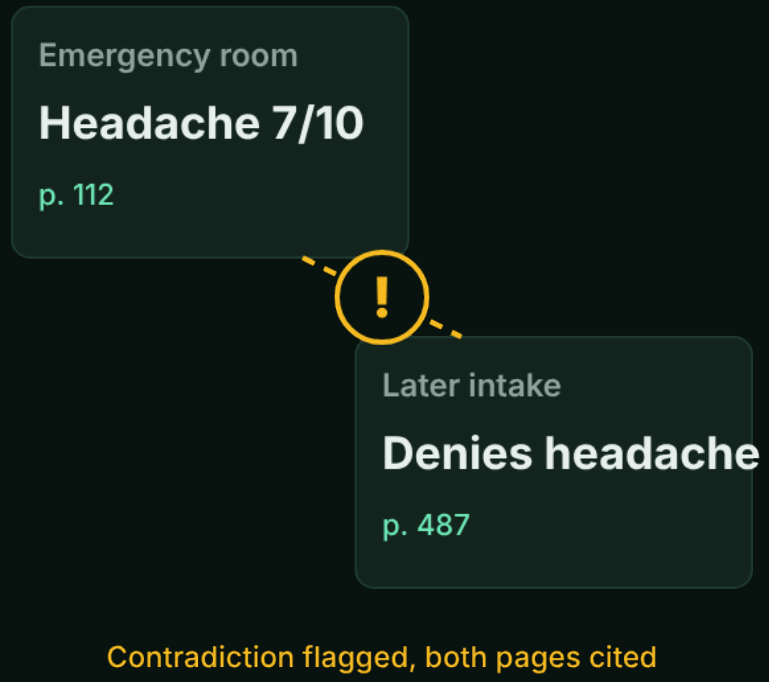

To be clear: Not every case needs all 32 queries. You order only the ones your case needs.

Incindra

QUESTIONS 19–20 · HOW I HANDLE IT

Raising the bar

- If you’re happy with what you have, the fair test is whether I find something it missed, on a case you already know.
- If you’re not, the one thing you’d change is where the side-by-side starts.
- The same record on the same version gives the same findings, so the comparison is stable.

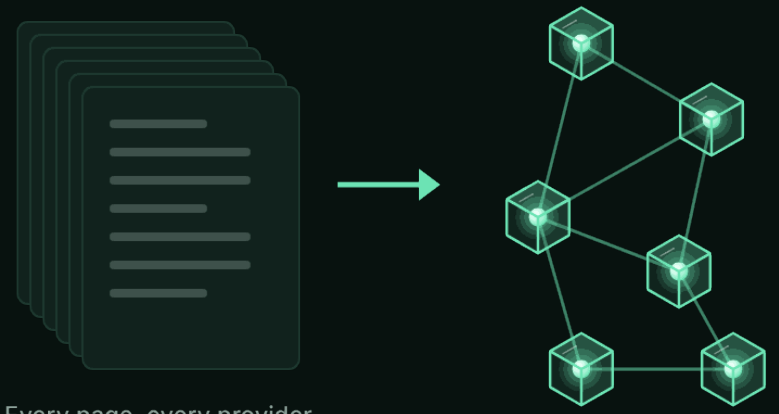

To be clear: I’ll show you what I catch. If I don’t catch more, I’m not the right fit for you.

Incindra

QUESTION 23 · HOW I HANDLE IT

Records of any size

- Every source page costs the same, however large the record.
- I read the whole record in one run, usually within a few hours, depending on its size.
- When new records arrive, I reprocess the whole record at a reduced page rate, so every connection stays complete.

To be clear: Send the complete record the first time. I connect it best when I see everything at once.

Incindra

QUESTION 24 · HOW I HANDLE IT

Pay for what the case needs

- The chronology is priced per source page. Each advanced analysis is priced per query.
- You don’t need a subscription to start.
- If it fits, your first case is at no charge: a chronology plus three queries, up to 1,000 source pages.

Records	every page, recorded ✓
Model	version recorded ✓
Ontology	version recorded ✓
Evidence library	version recorded ✓
Run	logged, reproducible ✓

What each case run records

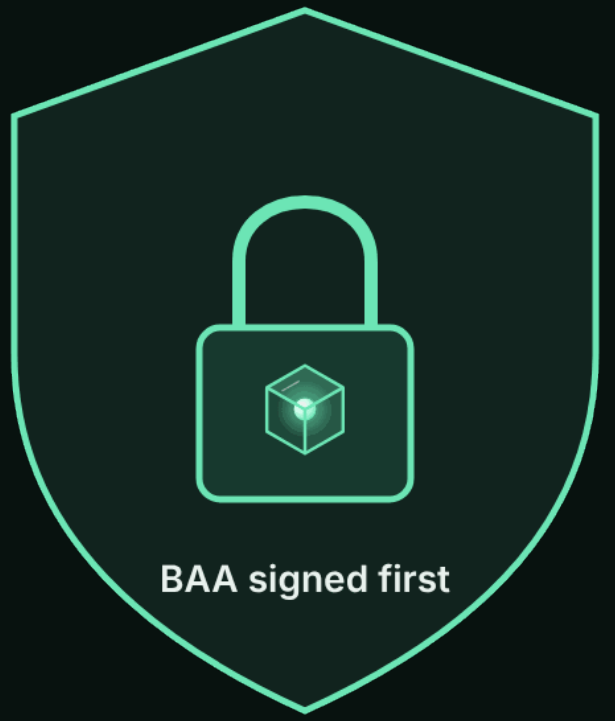

To be clear: Questions you ask Logos Assist are billed per question.

Incindra

QUESTION 26 · HOW I HANDLE IT

What I have to prove

- Every claim is cited to its page and checked against that page.
- The same record on the same version gives the same findings, and every run records which versions were used.
- One agreement, including a Business Associate Agreement, is signed before any record is loaded. You can delete records at any time.

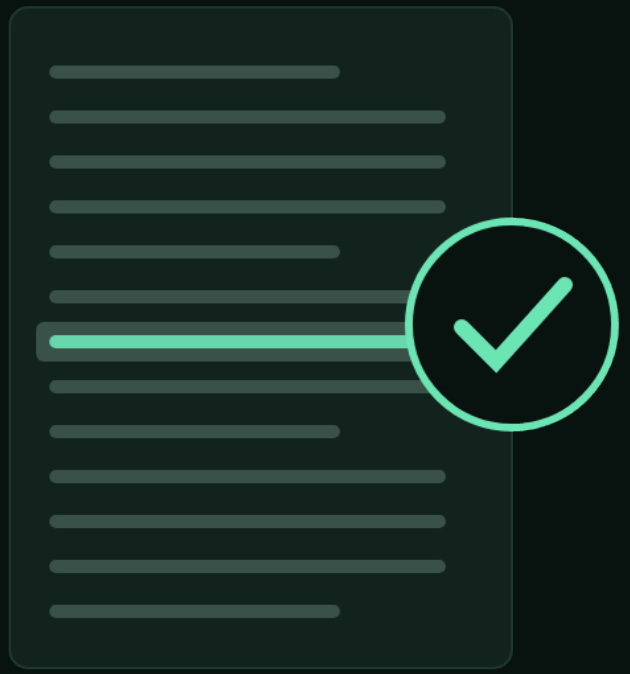

To be clear: SOC 2 is planned, not done yet. My accuracy hasn’t been measured yet.

Incindra

QUESTION 27 · HOW I HANDLE IT

Your case-management software

- I don’t connect directly to case-management software. You upload the records and download the reports.
- Reports are files you can keep in any system your firm uses.
- Every report carries a version number, so the copy in your file matches the run that produced it.

p. 451

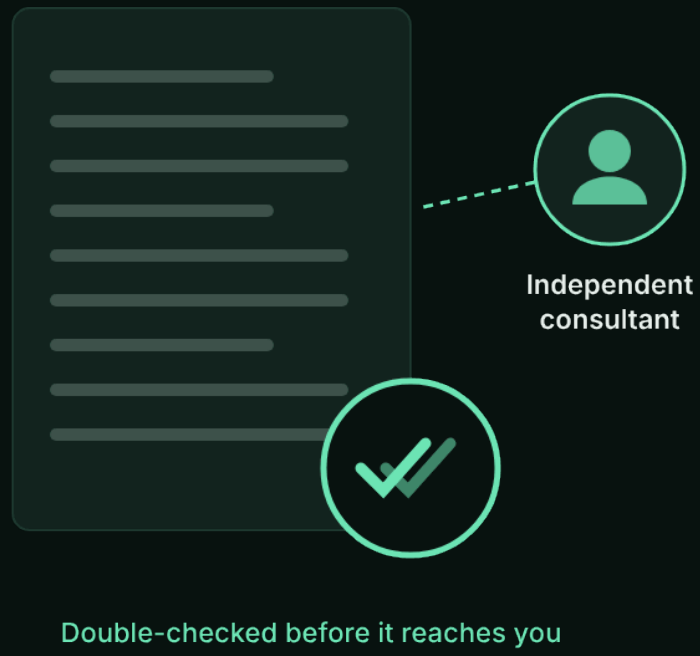

To be clear: Your answer helps us decide whether a direct connection is worth building.

Incindra

AVAILABLE WITH A FULL REPORT

Want a person to check my work?

- A full report is the chronology plus all 32 advanced queries. Before it reaches you, my verification check double-checks every source and claim.
- It also gives you access to Incindra consultants: independent medical experts who use my advanced tools to review the report and give an expert opinion.
- The report is included in its price. A consultant's review, opinion, calls and emails are billed by the consultant, not by Incindra.

To be clear: consultants are independent of Incindra. They, and your own experts, decide what the findings mean.

Incindra

YOUR NEXT STEP

Run one of your finished cases.

If it fits, a chronology plus three advanced queries, at no charge, up to 1,000 source pages.

We agree three success criteria before it starts, and review the results together.
